	Not updated since last issue

Latest trends

The tourist season was very strong in Europe this summer, particularly in the southern countries of the continent. As usual, the high influx of international and domestic tourists generated increased demand for food products, including fish, from the HORECA sector. Consumption of high-quality fishery products went up, especially for shrimp and cephalopods, leading to higher price levels in the market.

Prices

Groundfish	11

The European Fish Price Report, based on information supplied by industry correspondents, aims to provide guidance on broad price trends. Price information is indicative and should be used only for forecasting medium- and long-term trends. FAO is not responsible for any errors or omissions.

Crustaceans

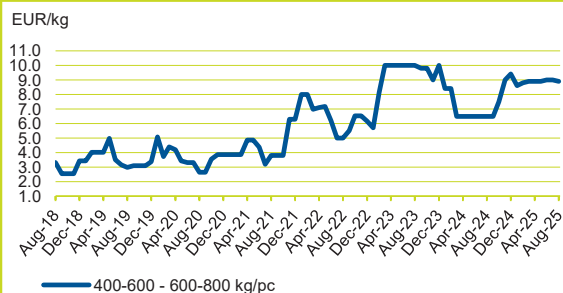

Shrimp imports in the European Union improved marginally during the second quarter of 2025 as marketers procured supplies in preparation for the high summer consumption period. January–June 2025 imports added up to 438 700 tonnes in comparison with 426 000 tonnes over the same period last year.

Specific to individual markets in the European Union, imports increased in Spain, France, Germany, Portugal and Greece; in contrast, imports declined in the Kingdom of the Netherlands, Italy, Denmark and Poland. Imports did not recover in the Eastern European region either, one reason being the conflict in Ukraine. Ecuador is the main supplying country for shrimp to the EU market, accounting for one-quarter of total shrimp imports.

ARGENTINA RED SHRIMP - origin:

CRAB - in France, origin: Europe

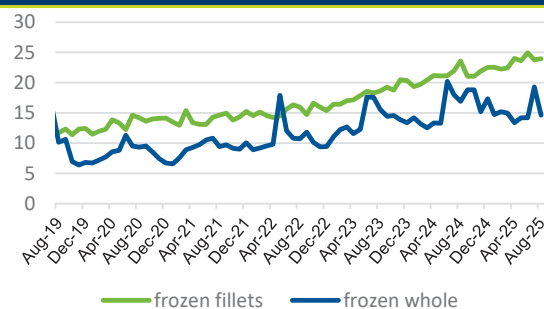

Small pelagics

Norway exported 9 521 tonnes of herring worth NOK 184 million (USD 18 million) in July 2025, a 13 percent value decline from July 2024, while volume fell by 11 percent. Poland, the Netherlands and Germany were the largest markets for herring in July.

May, June and July are important months for catching North Sea herring. Fishing in June was particularly good this year, while July was somewhat weaker than last year. This is reflected in the lower July exports. However, cumulatively (May to July) some 32 400 tonnes were exported, which compares to 29 000 tonnes in the same period last year.

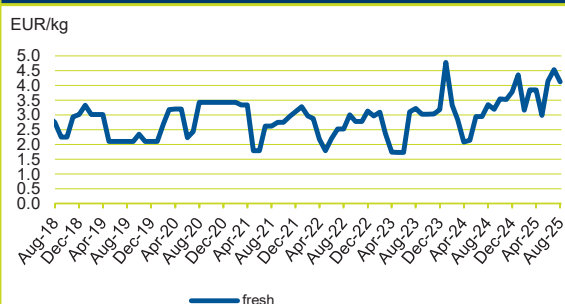

Herring - origin: Norway

Mackerel - origin: Norway

Mackerel - in Italy, origin: France

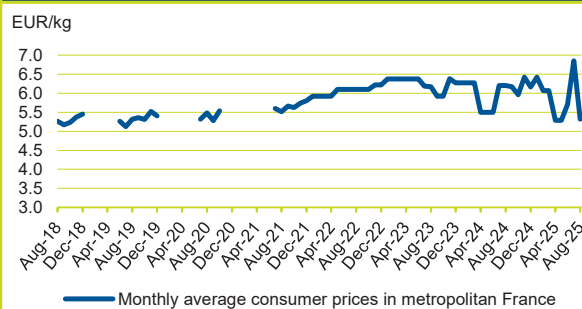

Bivalves

France remains one of the largest oyster producers in Europe, especially in regions like Brittany, Normandy and Arcachon. In 2025, the global oyster market value is expected to reach USD 9.77 billion, of which a significant share will be contributed by France.

The French oyster market is projected to grow in 2025, with continued expansion through 2029. Underpinned by sustainable aquaculture practices, this growth is driven by rising demand for premium oysters and increased consumer interest in seafood. However, fresh oyster production in France is forecasted to experience a slight decline in value, from EUR 1.82 per kg in 2024 to EUR 1.73 per kg in 2025, indicating potential pressure on margins. There is growing demand for organic and responsibly sourced oysters, as well as a rise in online sales and ready-to-eat packaged product. Major challenges include climate change and pollution, which are affecting oyster beds.

MUSSEL BOUCHOT - in France

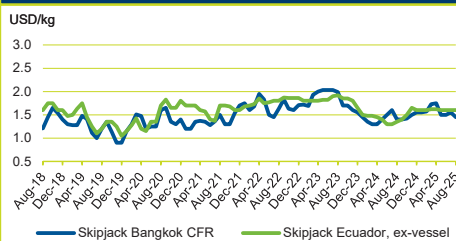

Tuna

The global tuna market mainly consists of fresh and frozen, as well as canned products, with the latter seeing strong international demand, particularly from North America and Europe.

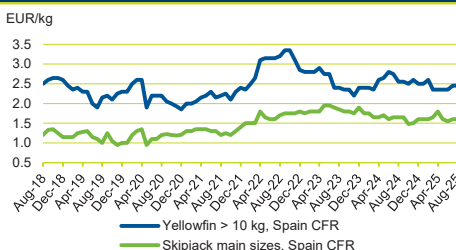

Ecuador remains one of the top global exporters of tuna (especially canned and frozen varieties) but this ranking comes not without its challenges. There is increasing emphasis on sustainable fishing practices and traceability, which are shaping production and marketing strategies. Consequently, Ecuador's tuna exports are bolstered by its reputation for quality and compliance with international standards. The port city of Manta continues to be a key centre for tuna packing, benefiting from healthy raw material inventories thanks to good catches in the Eastern Pacific Ocean. Tariff changes and geopolitical tensions have introduced volatility in trade and logistics.

In 2025, Ecuador benefits from preferential access to the European Union market under the EU's Generalised Scheme of Preferences Plus (GSP+), which significantly reduces or eliminates tariffs on many products. Ecuadorian canned tuna (HS Code 1604.14) for instance, which typically is subject to a 24 percent tariff, enjoys duty-free access under GSP+. Similarly, frozen tuna (HS Code 0303.42) is eligible for zero duty under GSP+, especially when used for further processing within the European Union; fresh tuna (HS Code 0302.42) may face minimal tariffs, but often enters duty-free depending on the specific product form and quota status. At the same time, Ecuador must maintain commitments to international conventions on labour rights, environmental protection, and governance to retain GSP+ benefits. This preferential treatment makes Ecuadorian tuna highly competitive in the EU market, especially for processors and retailers seeking sustainable and traceable sources.

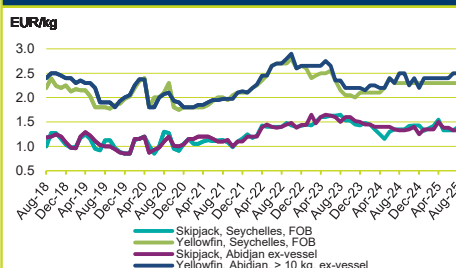

TUNA - Pacific Ocean

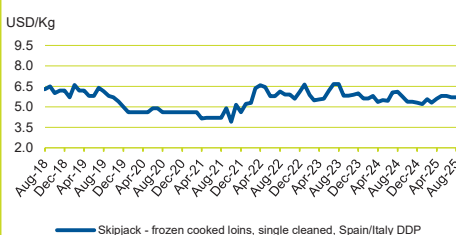

TUNA - Spanish canneries

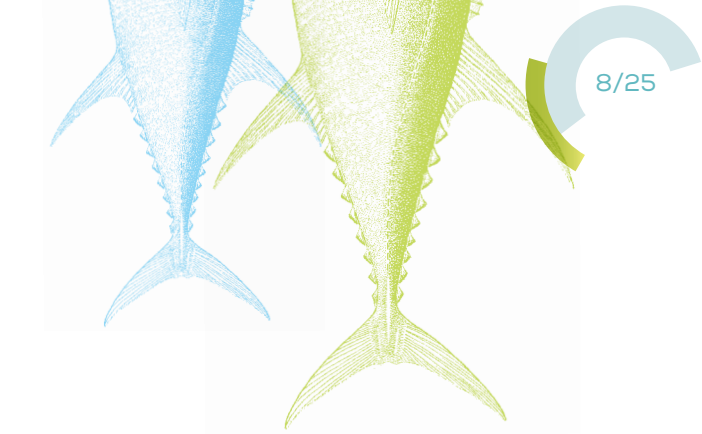

TUNA - Indian/Atlantic Oceans

TUNA - Loins

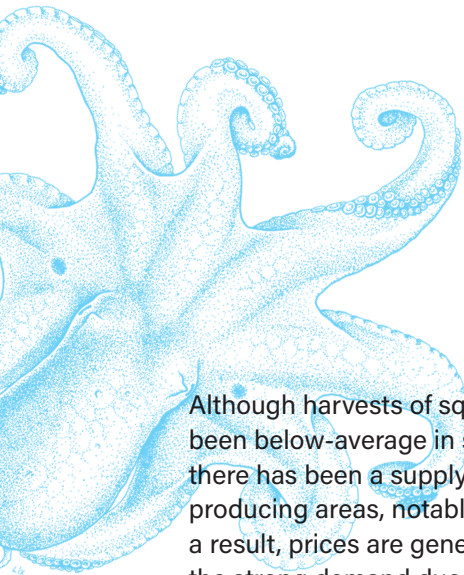

Tuna (cont.)

Imports of all tuna products into the European Union (EU) rose sharply in the first half of 2025 to 567 200 tonnes, up from 506 000 tonnes during the same period in 2024. This increase came primarily from higher Ecuadorian tuna exports, up by 28 percent or almost 30 000 tonnes in H1 2025 over the same period in 2024.

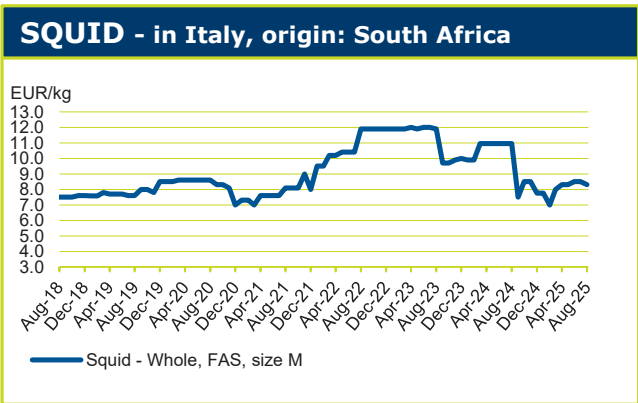

In the United States of America, some 16 188 tonnes of tuna in air tight containers may be entered, or withdrawn from warehouse, for consumption during Calendar Year 2025, at the rate of 6.0 percent ad valorem. Any such tuna which is entered, or withdrawn from warehouse, for consumption during the current calendar year in excess of this quota will be dutiable at the rate of 12.5 percent.

EU imports of all tuna products during January-June (in tonnes), by country of origin

World	491 104	505 993	567 287

Cephalopods

Although harvests of squid and cuttlefish have been below-average in some producing regions, there has been a supply glut in certain key producing areas, notably Peru and Argentina. As a result, prices are generally going down, despite the strong demand due to the summer holidays. Squid catching in South Africa remains difficult, with no improvement in prices. Meanwhile, the local currency has firmed relative to the Euro, which is not helping matters.

Groundfish

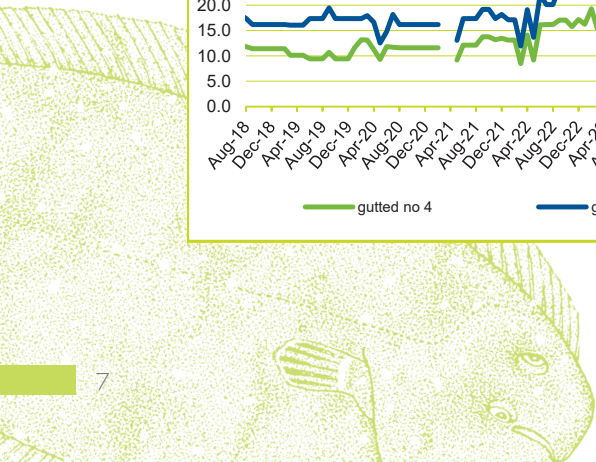

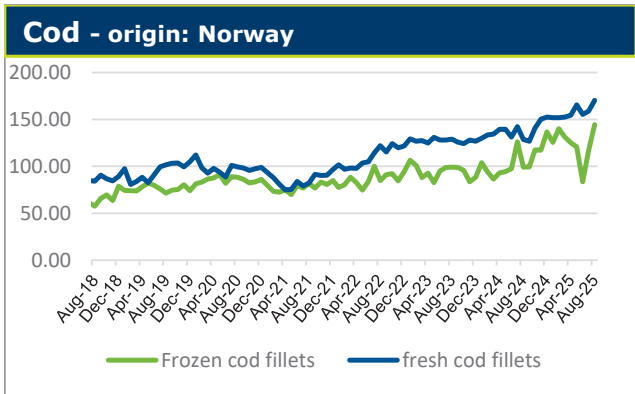

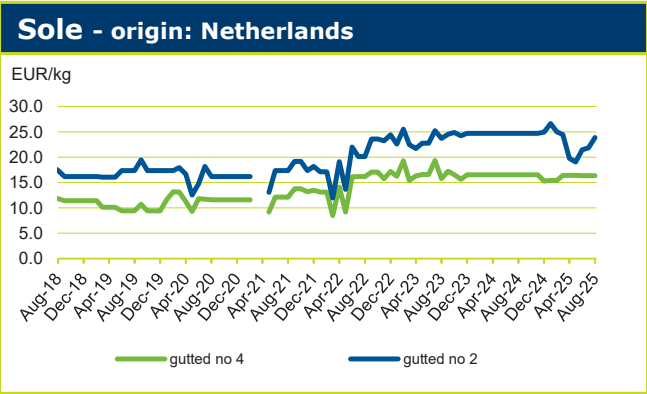

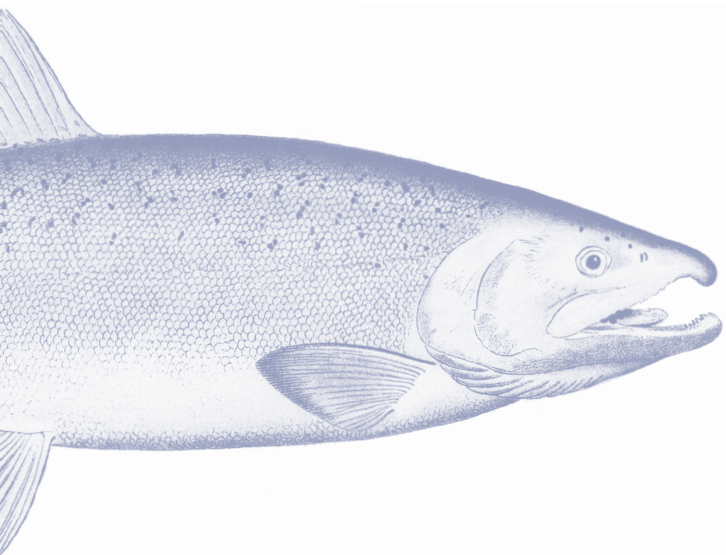

Norway exported 2 055 tonnes of fresh cod with a value of NOK 144 million (USD 14 million) in July 2025; although there was a value increase of 6 percent over the same month last year, volume fell by 12 percent. Denmark, the Kingdom of the Netherlands and Poland were the top destinations for fresh cod in July, functioning as transit points for the re-export of product to other large fresh markets such as Spain, France and Germany. Landings of fresh wild cod continued to fall in July, resulting in a 7 percent drop in export volume to 1 314 tonnes, while export value increased by 19 percent. For fresh farmed cod, the export volume fell 20 percent to 741 tonnes, while the export value fell 11 percent to NOK 51 million (USD 4.8 million). Farmed cod accounted for 36 percent of the export value of fresh cod.

A total of 2 575 tonnes of frozen cod worth NOK 194 million (USD 18.7 million) were exported

from Norway in July 2025, up by 33 percent in value compared with the same month last year. There was also a surprising growth of 17 percent in export volume, July being the first month this year to record an increase in this regard. However, since landings of frozen cod continued to fall in July, stock adjustments were probably the main reason for this growth. The United Kingdom of Great Britain and Northern Ireland continued to be the largest single market for frozen cod from Norway, having absorbed 661 tonnes in July 2025.

The season of increased consumption of cured cod is about to begin, while the costs of production and raw materials are expected to drop due to good supply. However, from October onwards, prices will increase again in expectation of the peak Christmas consumption period.

According to the Norwegian Seafood Council (NSC), July's salmon export volume was exceptionally high for the season, approaching the record levels typically seen in September and October. This was largely due to favourable biological conditions, which boosted production compared with July last year.

Norway exported 136 054 tonnes of salmon worth NOK 10.2 billion (EUR 876 million) in that month, representing an increase of 28 percent in volume and 8 percent in value compared with July 2024. Poland, the United States, and the Kingdom of the Netherlands were the main destinations.

China emerged as the strongest growth market, with export value rising by NOK 339 million (EUR 29.1 million), or +80 percent, year-on-year. Shipments amounted to 9 950 tonnes, up by 121 percent. The NSC notes that China's salmon market has expanded rapidly, with category growth exceeding 50 percent in the second quarter of 2025. Norway's market share climbed to 71 percent in June – the highest level in 15 years – supported by competitive pricing and the expansion of new sales channels.

Poland, the largest export market for Norwegian salmon, recorded the second-highest growth in July with value up by NOK 291 million (EUR 25 million). Most of the salmon entering Poland is processed for re-export, driven in part by rising consumption of fresh salmon fillets in European markets such as Germany, the Czech Republic and Italy.

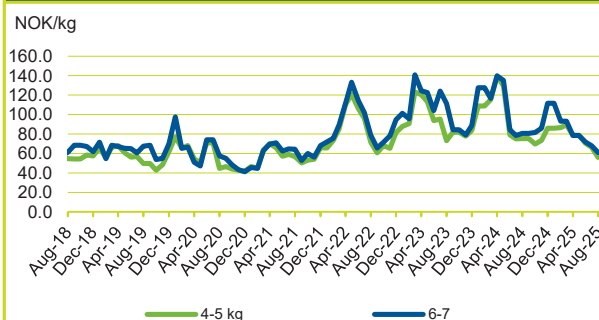

Salmon

Exports to the US market increased in volume by 16 percent, but their value rose by only 3 percent. According to the NSC, the slowdown in value growth is attributed mainly to price declines linked to substantial salmon supply both from Norway and globally, with additional pressure from the recently increased tariffs.

NSC data disseminated by the Undercurrent News Price Portal show that prices for HOG fresh Norwegian salmon, FOB at the border, reached NOK 66.09 (EUR 5.55) per kg in week 30 of 2025, down 4.66 percent compared with the previous week. Prices have generally trended downward since week 24, when they reached NOK 82.82 (EUR 7.22) per kg, although movements have been marked by fluctuations and irregularity.

Salmon - origin: Norway

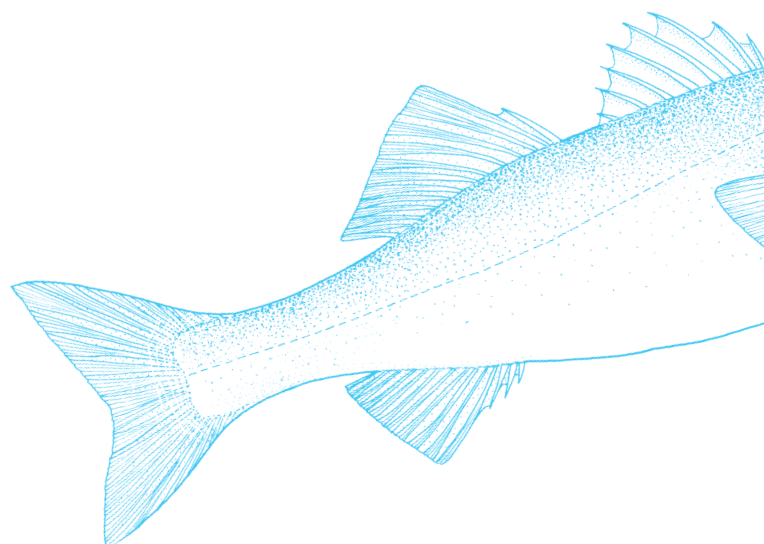

Seabass and seabream

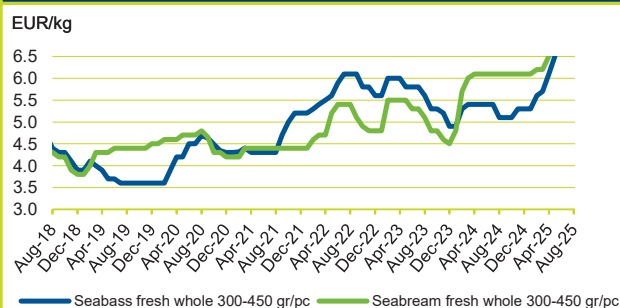

In the European market, seabream is often considered more delicate and flavourful, ideal for whole roasting. Seabass is versatile, widely used in fillets, ceviche, and Mediterranean dishes.

Tight supply and rising labour costs – especially in Turkey, a major exporter – are keeping prices elevated. High seawater temperatures have led to increased fish mortality, further squeezing supply. On the other hand, demand is seasonally strong. Due to good buying interest by the HORECA sector, large seabass is reaching price levels in the Spanish market of EUR 12.00 per kg.

Italy's seabream market is currently stable, with consistent demand and moderate growth reflected in a 20 percent increase in trade value year-on-year. Despite fluctuations in Turkish exports and currency shifts, Italy's seabream supply has remained stable, with no major price shocks. Italy continues to be one of the top destinations for seabream from Turkey and Greece.

SEABASS/SEABREAM Italy origin Greece

Trout

Norway exported 9 409 tonnes of trout worth NOK 697 million (EUR 59.9 million) in July 2025, representing an increase of 20 percent in volume and 11 percent in value compared with the same month in 2024. Lithuania, the United States and Ukraine were the main destinations in the month under review. Lithuania recorded the strongest growth, with export value up by 45 percent to NOK 32 million (EUR 2.75 million), and a 56 percent rise in volume to 1 448 tonnes, year-on-year.

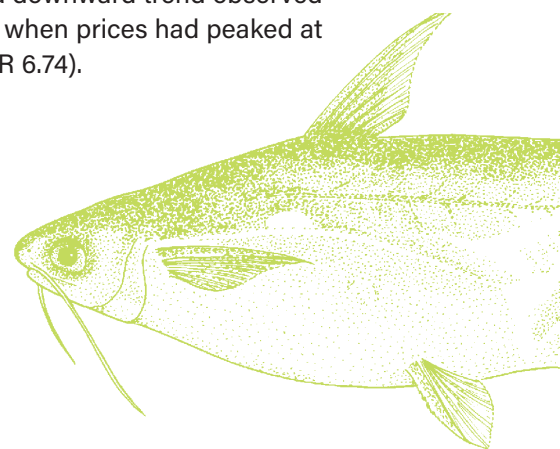

According to the NSC, favourable production conditions have supported robust growth in trout exports this year. In the first seven months of 2025, export volumes increased by

30 percent in product weight, while value rose by 18 percent compared with the same period last year. This performance outpaced that of salmon, which grew by 23 percent in volume and 3 percent in value over the same comparative period.

NSC data disseminated by the Undercurrent News Price Portal indicate that prices for HOG fresh Norwegian trout, FOB at the border, averaged NOK 68.26 (EUR 5.73) in week 30 of 2025, up 4 percent from the previous week. This marked a notable rebound after a downward trend observed since week 24, when prices had peaked at NOK 77.37 (EUR 6.74).

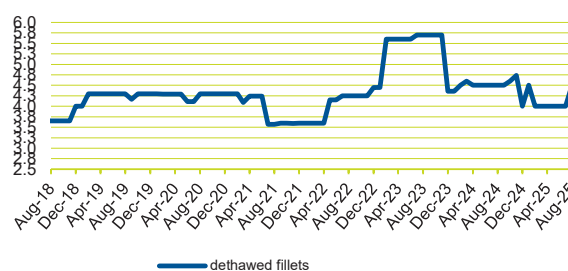

Freshwater fish

Continuing the previous upward trend, imports of frozen pangasius into the European Union in Q1 2025 strengthened by 13 percent in volume at 19 309 tonnes valued at USD 58 million (+15 percent) compared to the same period in 2024. Some 81 percent of this amount was supplied by Viet Nam while smaller volumes came from other supply sources in Asia, namely Indonesia and Myanmar. Germany, Spain, Belgium and Italy were the top importers, with the Kingdom of the Netherlands leading the way, mostly for re-exports.

Pangasius - in Italy, origin: Viet Nam
