Tuna processor Pacific TUM boosts efficiency with new grader

For Pacific TUM Cold Storage, innovative technology has played a crucial role in driving their growth and success. Looking to enhance their tuna processing operations, they turned to a Whole Fish Grader from Marel and immediately saw improvements in fish weighing accuracy and labor costs.

An ambitious young company looking to enhance efficiency

Pacific TUM Cold Storage provides processing and storage services for tuna, salmon and other seafood products. Founded in 2012, the company is headquartered in Samut Sakhon about 48 km from Bangkok. Pacific TUM is part of a joint venture between Pacific Cold Storage Co and Thai Union Manufacturing (TUM), which is a member of the Thai Union Group.

Before investing in the Marel Whole Fish Grader, Pacific TUM relied heavily on manual labor for sorting and weighing fish, a process that was not only time consuming but also prone to inaccuracy.

"We needed staff to handle the species categorization and weighing, which sometimes led to weight discrepancies, affecting customer satisfaction," explained General Manager Pichit Wongphakham.

Customer feedback also highlighted issues with size categorization, leading to delays and re-sorting. "Incorrect size categorization would lead to a re-categorization process, which extended the overall work duration," explained Pichit.

Customer Service Supervisor, Pacific TUM Cold Storage, Pichit Wongphakham, explained that the Marel Whole Fish Grader was a game-changer for their grading and sorting processes.

"After implementing Marel's Whole Fish Grader, we have been able to reduce labor costs. In short, we have gained accuracy in fish size categorization and weight measurement," said Pichit.

"The process is much faster, and we've significantly reduced labor costs"

Selecting the right tuna grading solution

Pacific TUM researched multiple grading solutions. Marel's Whole Fish Grader stood out for its flexibility and reliability. "We sought a fish grader solution with three to four companies over some time," explained Wongphakham. "One key factor was that several other companies of Thai Union were already using Marel products. We observed these products in action, and they have proven to be reliable. Despite being installed for a long time, the tools are still in excellent condition and meet customer requirements."

"Considering that the pricing was quite similar across the options, we felt that the Marel solution offered the most flexibility for our needs, which is why we chose Marel," continues Wongphakham. "In our experience with Marel, we know it would be good technology, a good solution and good after-sales."

About the Whole Fish Grader

Ideal for tuna processing, the Whole Fish Grader is a high-accuracy sorting system that categorizes fish by size into 100 bins or boxes, saving efficiency and improving product handling. By weighing and grading fish precisely, it avoids better downstream operations—such as deboning and filleting—and boosts yields by sorting machine eating.

Transformation achieved: Faster, more accurate, and more efficient

After installation, Pacific TUM quickly saw tangible benefits. "The fish key improvement is the accuracy of the fish weight. Since the weight for each size is 100% accurate," says Wongphakham. "Previously, the process is much faster and not as significantly reduced labor costs. Previously, we needed 10-12 workers per truck, but now we only require 3-4 for sorting. This not only benefits us but also our customers. All thanks to the implementation of this solution," he adds.

In addition to accuracy, Pichit notes, "Using Marel helps establish standardized work processes, enhancing efficiency and enabling us to measure work outcomes. This leads to greater customer satisfaction."

By streamlining processes and ensuring consistency, Pacific TUM has not only met immediate challenges but also positioned itself to keep delivering efficient, high-quality service as market demands evolve.

Call to

For Marel, partnering with Pacific TUM Cold Storage was about understanding the customer's unique challenges and goals, and working together to deliver a solution that truly fits their needs. John Viova, Regional Director Sales, Fish Area and Oceans at Marel, closed the thought.

"We are proud of working with Pacific TUM Cold Storage on this project as it is very important for Marel to fully understand our customer's challenges, so we can support them precisely by working in close collaboration. Together, we are able to provide an innovative grading solution for tuna processors, so they can deliver the right tuna size to their customers and fulfill their expectations. I believe this is the first of a long cooperation between our two companies."

By automating critical processes, improving weight accuracy, and reducing labor needs, Pacific TUM has set the stage for future growth and success in the tuna processing industry. The collaboration with Marel has helped them stay proactive in meeting their customer's evolving needs—a testament to the power of collaboration and finding the right technology.

INFOFISH//

INFOFISH originally launched in 1981 as a project of the Food And Agriculture Organization (FAO) of the United Nations. Since 1987, it is an Intergovernmental Organization providing marketing information and technical advisory services to the fishery industry of the Asia -Pacific region and beyond from its headquarters in Kuala Lumpur, Malaysia. Fourteen countries are currently members of INFOFISH which are Malaysia, Maldives, Sri Lanka, Pakistan, Philippines, Papua New Guinea, Solomon Islands and Thailand.

INFOFISH is the leading source of marketing support for fish producers and exporters in the Asia-Pacific-a region which includes some of the largest fishing nations in the world. Its activities include bringing buyers and sellers together, publication of current and long-term marketing information and operation of technical advisory and specialized services. In addition to organizing exhibitions, conferences, workshops, seminars and training programs, INFOFISH undertakes consultancies on all aspects of fisheries-pre-harvest, harvest and post-harvest.

THE AIM OF THE PROGRAMME

The objective of the scheme is to provide a formal mechanism through which the global fishery industry may effectively interact with INFOFISH Member Countries, policy makers, financial institutions and academia, especially in the Asia-Pacific region, to promote intra-regional and inter-regional trade and exchange of marketing and technical information.

WHO SHOULD JOIN

Companies, corporate bodies, institutions and associations, academia etc linked to fishery field, irrespective of nationality.

HOW TO JOIN

Those who wish to join the membership should indicate their interest to INFOFISH with some background information of themselves, institution or the corporate body as applicable. In response to such requests they will receive an application form which has to be fully filled out and submitted, along with the annual fee for membership.

THE FEE

The fee for Associate Membership is US\$3,000 per annum which is to be paid at the time of submission of membership application.

BENEFITS

The scheme entitles Members to a wide range of benefits. These include:

- Attendance of Observers at the meetings of the Technical and Advisory Board where the Members would have the opportunity to express their views and observations on INFOFISH programmes as they related to industry and indicate their priority needs.

This would also serve as an opportunity for Members to discuss problems affecting trade. The meeting could also serve as a forum to make representations on important issues including tariff, non-tariff barriers through INFOFISH to appropriate global trade bodies and to interact with the officials from Member Countries for investment and trade promotion.

- Participation to one (1) INFOFISH Trade/ Commodity Conferences, fee of registration fee;
- Entitlement for free subscription to INFOFISH *Trade News*, *European Fish Price Report (EPR)*, *GLOBEFISH Highlights (GH)*, *The Fish Inspector*, *Fishing Technology Digest* and *INFOFISH International*, including free online subscription for one year of the latter.
- Avail three (3) other INFOFISH publications for free and 35 percent discount on the normal price for the succeeding purchases;
- Access to advertise corporate activities in INFOFISH International for free; full page ad for 3 issues; Two-page advertorial in INFOFISH International featuring company profile in one(1) issue; Entitlement of free banner advertisement in INFOFISH website; including a website link featuring company profile;
- Priority attention to request for marketing and technical information; Twenty percent discount on the normal INFOFISH consultancy fee;
- Access to Technical Information Center databank for any Technical Information Package;
- A Certificate of a Associate Membership;
- Any other benefits that the Technical and Advisory Board or Governing Council may consider appropriate, from time to time.
